

- the ability to judge, comprehend and reason.
- the ability to understand and deal with people, objects and situations.
- the ability to act purposefully, think rationally and deal effectively with the environment.

FACTBOT

People mostly use the words 'knowledge' and 'intelligence' interchangeably. Knowledge is fact and information that is acquired with experience whereas intelligence is how one can understand and apply the learnt skill to solve problems.

Types of Intelligence

The intelligence can be of the following types (Fig. 1.1):

- **Linguistic Intelligence:** This is the ability to think and use correct and appropriate words while talking and writing.
- **Mathematical Intelligence:** This is the ability to carry out mathematical operations. It also includes an understanding of objects and symbols used in Mathematics.
- **Interpersonal Intelligence:** This includes the ability to understand and effectively interact with others. It also includes the ability to notice and make distinctions among moods, temperaments, motivations and intentions of other people and the potential to act on this knowledge.

- **Intrapersonal Intelligence:** This includes the ability to understand oneself. It also includes identifying what you want and don't want, and to accept your strengths and weaknesses. When we understand and accept ourselves, we can build on our strengths.

- **Musical Intelligence:** This includes sensitivity and understanding of pitch, melody, rhythm and tone.

It also includes the understanding of tones and phrases of music in the surroundings. It is an understanding of the ways to combine tones and phrases into larger musical rhythms as well as structures and includes an awareness of the emotional aspects of music.

- **Spatial Intelligence:** This includes the ability to think three-dimensionally. It includes the capacity to perceive the visual world accurately, perform transformations upon perceptions and detect similar patterns.
- **Naturalistic Intelligence:** This includes the ability to observe patterns in nature and understand natural and human-made systems. It also includes sensitivity and understanding of plants, animals and other aspects of nature.
